

Angular Admin Dashboard Task

Objective: Build an educational management dashboard using Angular.

1. Data Table

Create a Data Table for Students with ID, Name, Email, Phone, and Status. Include Search, Pagination, Sorting, and Responsive Design.

2. Expandable Row

Clicking a student should open additional details including Classes, Number of Sections, Number of Lectures, and Creation Date.

3. Students Management

Implement full CRUD operations for Students.

4. Teachers Management

Implement full CRUD operations for Teachers.

5. Classes Management

Implement full CRUD operations for Classes and assign Teachers.

6. Sections Management

Implement full CRUD operations for Sections and link them to Classes.

7. Lectures Management

Implement full CRUD operations for Lectures and assign them to Sections.

8. Student Enrollment

Add and remove students from Sections and display enrolled students.

9. API Integration

Use Mock API or JSON Server.

10. Architecture

Use Lazy Loading, Shared Modules, Reusable Components, Services, Reactive Forms, and RxJS.

Bonus

Angular Material, Route Guards, Loading Spinner, Toast Notifications, and Dark Mode.
